Once Again, We're Bringing Back

JLCC's Burner Maintenance & Reliability Program

Defining the Art of Combustion

COMBUSTIONCONSULTANTS.COM

JLCC's Burner Maintenance & Reliability Program

One of the most over-looked money-savers in refining and food & beverage operations today is savings on natural gas usage. Sometimes, pilot gas alone is being wasted by the millions of BTUs with poor orifice drillings and mixing capability. Some burners are so inefficient that an entire process can show more negative return than originally anticipated.

Backed by over a hundred years' experience, we will come in and inspect the operation and flame pattern of each process burner and pilot in the plant and make adjustments on a regular basis to increase your efficiency and also stay in or help bring into compliance of each fired unit.

Some burners and pilots may need cleaning and adjustments. In many cases we find that pilots alone are inefficiently sized wasting hundreds of thousands each month.

As all adjustments to the burners and pilots of each fired unit are completed, we will balance the unit by adjusting each burner and pilot until desired operation is achieved.

We usually start with a specific number of burners each week and plan accordingly from there.

At times, we will find additional work that needs to be completed on the burners such as replacement parts, refurbishing, new or re-built pilots, nozzles, risers, etc. These items will be brought to the manager's attention and a proposal to do the additional work will be submitted as needed.

We are confident that if the increase in efficiency we bring are tracked for all the burners in the facility at the end of 12 months, savings could exceed MILLION\$ annually.

We offer one, two, and three-year agreements to take over this responsibility for only a fraction of your annual savings.

In addition to this we are always extending our offer to have a combustion consultant available to you for any combustion issues that come up during the term without additional day rate or analyzer expense. Our team will be in your plant regularly enough to warrant this offer.

Our mission in combustion is not only to solve problems that arise but prevent problems from arising while saving other expenses making your operation far more efficient than it currently is.
